LUKOIL LAUNCHES NEW PRODUCT FOR COMMERCIAL VEHICLES OF EURO-6 CLASS IN RUSSIAN MARKET

LUKOIL starts domestic production of LUKOIL AVANTGARDE PROFESSIONAL LE 5W-30 and 10W-40, a new generation engine oils for commercial vehicles. The product meets all four basic European requirements for commercial vehicles such as ACEA E4, E7, E6 and E9 as well as the North American CJ-4 specification.

LUKOIL AVANTGARDE PROFESSIONAL LE is an all-season fully synthetic Lo SAPS oil for high-speed diesel engines, including those fitted with a diesel particle filter (DPF), turbocharged, and equipped with exhaust gas recirculation (EGR) and Selective Catalyst Reduction (SCR) systems. Until recently, LUKOIL produced this oil (the only available viscosity grade being 5W-30) at its Austrian plant and delivered it exclusively to European OEMs as a first fill oil.

European laboratory tests have revealed that LUKOIL AVANTGARDE PROFESSIONAL LE protects engine parts from wear 40 percent better than required by the ACEA E9 standard. The product also provides for a cleaner engine, surpassing the ACEA E6 specification requirements by 46 percent. In addition, the product's other key advantages include stable viscosity-temperature properties, which top the API CJ-4 requirements twice.
